### **ACKNOWLEDGMENT**

The publication of this bulletin was made possible through the efforts and cooperation of many individuals as well as private and governmental institutions. To all of them the Florida Agricultural Statistics Service expresses its appreciation.

Many farmers and agricultural enterprises have voluntarily supplied information to develop these statistics. The Agricultural Stabilization and Conservation Service has been were the Florida Department of Agriculture, the Agricultural Experiment Stations and Cooperative Extension Service, University of Florida.

This bulletin is published by the Florida Agricultural Statistics Service, a cooperative office of the USDA, Florida Department of Agriculture; and Agricultural Experiment Stations, University of Florida. Acreage, production, and value data are official statistics assembled under the direction of Jerry D. Campbell, and William C. Erwin of the Florida Agricultural Statistics Service.

## INTRODUCTION AND SUMMARY OF THE 1986 FIELD CROP SEASON

### INTRODUCTION

This publication, released annually, contains State level estimates of acreage, yield, production, and value of production for major field crops grown in Florida. The period covered for these crops is from 1976 through 1986. Winter wheat estimates were discontinued after 1978; but, were reinstated in the national estimating program in 1985. Therefore, several years are missing from this series.

County data for the major counties which grow corn, soybeans, sugarcane, peanuts, tobacco, and cotton are published for the years 1977 through 1986. Some of these estimates have been revised from those published previously. The complete series of crop estimates, dating back to 1919 for the State, are available upon request.

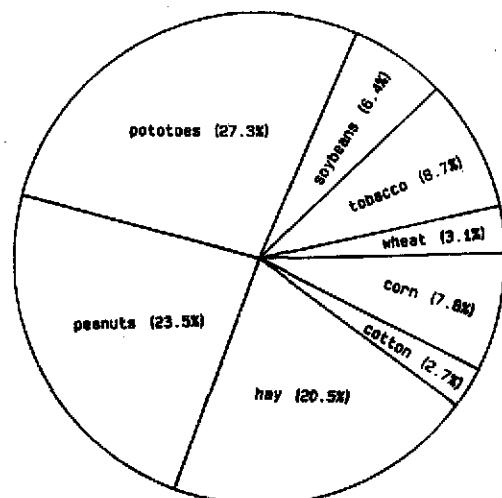

### SUMMARY, 1986 SEASON

The beginning of 1986 was wet and cool with a damaging freeze on March 23. Following the freeze, there was very little rainfall in the crop areas until early to mid-June. Corn planting was underway by late February; however, a considerable acreage was burned severely or killed by the late freeze and was replanted. Planting of tobacco, peanuts, soybeans, and cotton generally ran behind schedule as a result of droughty conditions during the normal planting period. Winter wheat matured rapidly with harvest being completed by mid-June. The last of the sugarcane crop had been cut by late March.

Both the planted and harvested acres of corn were down from the previous year. Acres planted, at 200,000 and harvested for grain, at 160,000, were down 17 and 16 percent respectively. With the exception of the 1983 season (PIK), both are the lowest of record. The average yield of 62 bushels per acre was down 3 bushels from a year ago. The season average price of \$1.95 per bushel was down 60 cents from 1985 and the lowest in 9 years. The total crop value of \$19,344,000, decreased 39 percent from a year ago, and was the lowest since 1977.

The 150,000 acres planted to soybeans was down 42 percent and the lowest in nearly 20 years. More dramatically, planted acreage

DISTRIBUTION OF FLORIDA  
SELECTED CROP VALUES, 1986

was less than a third of what it was 6 years prior. Acreage harvested for beans totaled 140,000, 39 percent below that of 1985. The statewide average yield of 23 bushels was down 3 bushels from the previous year. The season average price of \$4.90 per bushel was 29 cents below that of 1985 and the lowest since the \$4.40 received for the 1975 crop. This price, coupled with the lowest production since 1967, resulted in a crop valued at \$15,778,000—a drop of some 49 percent from 1985.

A total of 676,000 tons of hay was cut from 260,000 acres during 1986. This production was 8 percent greater than the previous year. The average yield of 2.6 tons per acre was unchanged from that of 1985. The \$75.00 average price per ton was \$2.00 above a year earlier. The 11 percent increase in value of production, to \$50,700,000, reflects both the increases in production and average price.

The 94,000 acres planted to peanuts was an increase of 18 percent from a year earlier and the largest peanut crop since 1958. Of the total planted acreage, 87,000 acres were harvested for dry nuts. The remaining acreage was either harvested as "green peanuts", cut for hay, pastured, or abandoned. The 2,680 pound average yield was down 320 pounds from that of 1985 and the lowest since 1980. This reduced yield is the result of, in large part, the extremely dry weather throughout the major producing area.

Total production, at 233,160,000 pounds, was up 8 percent from the previous year. The average price per pound of 25 cents was up 2 1/2 cents from a year ago and, combined with the increased production, resulted in a crop valued 20 percent above that of 1985.

Area planted to cotton at 19,500 acres, was 20 percent less than that planted a year earlier. The 19,000 acres harvested was 3,500 acres less than in 1985. Yields averaged 707 pounds per acre, an increase of 14 pounds from the previous year. Production, at 28,000 bales, was down 14 percent from a year earlier. The 1986 season average price of 50 cents per pound was 2 cents lower than for 1985 and the lowest since 1977. Growers in Santa Rosa County produced 69 percent of the State's cotton on approximately 60 percent of the harvested acreage.

Tobacco acreage continued a decline that started in 1977. In 1986, 5,300 acres were harvested, 13 percent less than the previous year. The average yield, at 2,510 pounds, fell 165 pounds short of the record high established in 1985. The combined reduction in acreage and yield resulted in the smallest flue-cured crop since 1943. The average price for all grades sold was \$1.622 per pound, down 8.7 cents from the previous year. The crop was valued at \$21,577,000, a reduction of 23 percent from that of the 1985 crop.

Acreage planted to winter wheat totaled 120,000 acres, down 25 percent from 1985. Of this total acreage planted, 100,000 acres were harvested for grain compared with 130,000 acres the previous year. The average yield of 31 bushels per acre, combined with the 100,000 acres harvested resulted in a production of 3,100,000 bushels, down 28 percent from a year earlier. The average price of \$2.45 per bushel was down 56 cents. This price, combined with the reduced production, resulted in a crop value of \$7,595,000, some 41 percent below that of 1985.

The area for sugarcane harvested for sugar and seed totaled 405,000 acres, up slightly from the previous season. Of this total, 390,000 acres were cut for sugar and the remaining 15,000 acres cut for seed. The average yield was 33.2 tons of cane per acre, 0.3 of a ton above the season before.

Production for both sugar and seed totaled 13,446,000 tons, up 3 percent from 1985. The value of production for the 1986 crop will be available in January 1988. The value of the 1985 crop, for sugar and seed combined, was placed at \$369,899,000, up approximately 1 percent from 1984. Florida, once again, was the nation's leader in the production of raw sugar, producing 1,476,000 tons, 45 percent of the U.S. raw sugar production from cane or 22 percent of the total U.S. sugar produced from both cane and beets. Blackstrap molasses, 80 degrees Brix, produced from the 1986 crop totaled 92,879 thousand gallons, up slightly from the prior year.

Utilized production from the 1986 pecan crop was 5,500,000 pounds, almost double the production of a year earlier and the largest crop since 1980. Of the total utilized production, 3,100,000 pounds were improved varieties and 2,400,000 pounds were native or seedling varieties. The average price for all pecans, at 59.5 cents per pound, was 4.5 cents below the average price for the previous year's crop. The value of the crop at \$3,271,000, was 83 percent greater than that of 1985 and 21 percent above 1984.

The area planted to potatoes, including both winter and spring crops, totaled 33,400 acres, a decrease of 6 percent from a year earlier. Harvested acreage, at 32,600 acres, was down 7 percent from 1985. The average yield for the total crop was a record high 262 cwt per acre. Production in Florida in 1986, including both winter and spring crops, totaled 8.5 million cwt, an increase of 8 percent from the previous year and a record crop, surpassing the previous high established in 1969. The average price of \$7.90 per cwt for all seasons, was down \$1.50 from a year earlier. The 8 percent production increase could not offset this lower price and therefore the crop value was 9 percent below that of 1985.

In the Hastings area, which includes Flagler, Putnam and St. Johns counties, the average yield was 280 cwt per acre for the spring crop, an increase of 35 cwt from 1985. Spring potatoes in other production areas, averaged 190 cwt per acre, down 20 cwt from a year earlier. The average yield for the winter crop was 210 cwt, up 45 cwt from 1985.
